

Online Monitoring and Visualization Display Panel with Alarms

The extremely flat display of up to 3 measurement values with alarms is installed in combination with OPUS200/300 monitoring systems.

At the same time, the display unit is equipped with a CAN-bus and as such participates in the entire network. The network data to be output via the display can be programmed via the software configuration.

In this way, in many distributed networks with central data collection on a PC, current measurement data can be visualized online by the technicians responsible on-site.

In combination with OPUS200 measurement data acquisition, flexible sensor-to-display assignment, low installation depth, with local alarms

Technical Data

Order No. 9900.20

Installation dimensions:

28cm x 9cm x 2.5cm (LxWxD)
